

What is a Text Inserter?

Video without Text Insertion

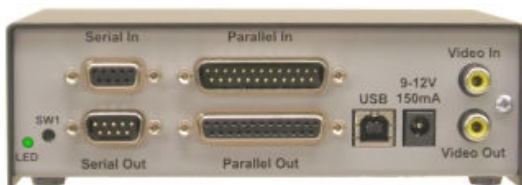

With Text Insertion you see the whole sale!

What is a Text Inserter?

A Text Inserter provides a means of combining the information in a digital data stream with [Closed Circuit Television or CCTV](#). The combination of data and CCTV video enhances the information content of both. Usually, the digital data stream is connected using an RS232 (Serial) or IEEE1284 (Parallel) Connection.

Text Insertion is a process resembling the [on-screen-display or OSD](#) familiar to many people from its universal application in modern television. Unlike the television application, where the OSD provides the user with information and control of the television or a VCR, a Text Inserter typically places information from outside the television onto video, typical from a **Closed Circuit Television (CCTV)** camera.

Typical Applications are for Point of Sale (POS), Industrial Automation, Electronic Scales, and any other type of Electronic Data that can be combined with a Video Source.
